

thinkskool

Learn Beyond Classroom

Traditional education hasn't kept up with the future.
thinkskool bridges that gap.

Executive Course in **AI & Machine Learning**

3 Months | Live Classes | Real Projects | thinkskool Certification

From Python Basics to Building a Face Recognition System

Foundations of **AI & MACHINE LEARNING** for Class 8 to 12

The question isn't whether AI will shape your child's future. It's whether they'll build it — or just watch.

MONTH 1

Python Fundamentals

Week 1-4

- Python basics
- Loops & functions
- Files & libraries
- OOP intro

MONTH 2

APIs, AI & ML

Week 5-8

- OpenAI API
- Live data APIs
- ML intro
- Classification

MONTH 3

Vision, Web & Demo

Week 9-12

- OpenCV vision
- Flask web apps
- Capstone build
- Demo Day

CAPSTONE: Face Recognition Attendance System

Live demo · Full web dashboard · Real audience presentation · thinkskool Certificate

Capstone
Project

What Your Child Will Build

12 weeks · 36 live classes · Foundations of AI & ML

Python Mastery

Write real Python programs with loops, functions, classes and libraries — zero to fluent in 4 weeks.

AI & ML Skills

Build real ML models, connect to the OpenAI API and learn to use AI as a professional tool.

Deployed Projects

Ship a face recognition system, a web app and 8+ mini-projects you can show the world.

The Skills Gap — and Your Opportunity

Most students have

- ✗ Watched YouTube coding tutorials
- ✗ Academic theory, no real projects
- ✗ No idea how AI actually works
- ✗ Never shipped anything live

thinkskool student have

- ✓ Built & deployed real Python apps
- ✓ Working ML models from scratch
- ✓ Integrated live APIs and AI tools
- ✓ Presented live to a real audience

Detailed Curriculum

MONTH 1

WEEK 1

Python from Scratch

Key topics:

- What is Python and why it matters.
- Setting up the environment.
- Variables
- data types
- user input
- if else conditions
- your first working program.

Project :

Smart Greeting Program

WEEK 2

Loops, Functions and Lists

Key topics:

- For loops
- while loops
- functions with parameters and return values
- Lists
- dictionaries
- How to organize and work with data.

Project :

Contact Book App

WEEK 3

Files, Libraries and Real Data

Key topics:

Reading and writing files permanently
Installing and using Python libraries
Combining all concepts into one real build.

Project :

Quiz Game with Score Saving

WEEK 4

Python Like a Pro

Key topics:

- Error handling with try and except
- Introduction to classes and objects
- Month 1 consolidation with a free build session.

Project :

Personal Python App

Tools used:

MONTH 2

WEEK 5

ChatGPT and AI Tools

Key topics:

- Using ChatGPT as a coding partner
- Prompt engineering basics
- Connecting to the OpenAI API
- building a chatbot with a custom personality.

Project:

Custom AI Chatbot

WEEK 6

APIs and Live Data

Key topics:

- What is an API
- JSON data handling
- Fetching live weather and news data from real external services.

Project:

Live Weather and News App

WEEK 7

Introduction to Machine Learning

Key topics:

- How computers learn from data
- Supervised and unsupervised learning
- Loading real datasets with Pandas
- Training a first ML model with Scikit learn

Project:

Exam Score Predictor

WEEK 8

ML Classification and Model Saving

Key topics:

- Classification models and decision trees
- Training, testing and accuracy scoring
- Saving and reusing a trained model with Pickle.

Project:

Spam Email Detector

Tools used:

ChatGPT

OpenAI

{JSON}

MONTH 3

WEEK 9

Computer Vision with OpenCV

Key topics:

- What computer vision is and how OpenCV works
- Loading images
- applying filters
- detecting edges
- Live webcam feed
- real time face detection.

Project:

Live Face Detector on Webcam

WEEK 10

Flask and Web Apps

Key topics:

- What Flask is and how web apps work
- Routes, templates and a local server
- Forms, user input and connecting a trained ML model to a web interface

Project:

ML Prediction Web App

WEEK 11

Capstone Build

Key topics:

- Full project build sessions with mentor checkpoints
- Face recognition engine
- auto attendance logging to CSV
- Flask dashboard to view records.

Project:

Full Working System End to End

WEEK 12

Demo Day and Certification

Key topics:

- Final testing and presentation prep
- Rehearsal with mentor feedback
- Live Demo Day in front of parents and guests
- thinkSkool certificates awarded

Project:

Demo Day and Certification

Tools used:

Capstone Project :

The final 2 weeks build toward one real, working system - presented live to an audience.

WEEKS 11 TO 12

AI Face Recognition Attendance System

A complete end-to-end AI project — the culmination of Foundations of AI & ML

- **Face Recognition Engine**
Live webcam with real-time face detection and recognition
- **Attendance Logger**
Auto-logs name and timestamp to CSV on every recognition
- **FlaskWebDashboard**
Live browser dashboard to view attendance records
- **Demo Day Presentation**
Presented live to parents, guests, and evaluators
- **thinkskool Certificate**
Awarded on successful completion and live demonstration
